

Coordinated System: Identifies the automated parts of the system that are in charge of creating, delivering, and maybe resolving alarms Staff Evaluation: Identifies the operators or users who are human and who have the ability to recognize and address alarms.

## Procedure Flow:

Generated: The system initiates and records an alert.

alerting generated: The alert has been formally acknowledged by the system.

Sent: The alert is automatically forwarded to the relevant parties.

Condition Satisfied (Automatically): The warning could be addressed automatically if certain requirements are satisfied. A staff member confirms that they have received the notice.

Condition Satisfied (Manually): A staff member manually resolves the alert in the event that certain requirements are satisfied. Staff Assessment: If more assessment is needed, the alert is forwarded to the staff for review.

Resolved: Either manually by staff members or automatically depending on criteria, the problem or incident that caused the alert is resolved.
